About Me

I see systems not only as tools, but as experiences people interact with daily. I craft digital platforms that operate quietly yet effectively. By combining logic and visual storytelling, I design workflows that simplify real daily challenges and elevate the user's emotional experience. Every project becomes a place where I learn, explore, and shape ideas into experiences.

Toward secure systems. As my projects have grown from single prototypes into production-facing platforms, security has become a natural extension of my design process — from structuring role-based access in enterprise systems to hardening authentication flows against abuse in my point-of-sale platform. Going forward, I want to deepen this intersection between clean system design and secure backend engineering.

Currently: 6th-semester Information Systems student at Institute Widya Pratama (GPA 3.79 / 4.00), taking on freelance backend development work alongside coursework — building the habit of shipping real, client-facing systems rather than only academic exercises.

My Journey

2023 — Curiosity & Academic Beginnings

Learning foundations: logic & algorithms, operating systems, HTML/CSS/JS, programming basics. First compiler setup — learned to think in structures and loops.

2024 — Learn & Explore

Academic growth: relational databases, OOP design, system architecture, software blueprints. Applied SOLID principles and designed normalized schema blueprints.

2025 — Systems Builder

Real project experience: attendance systems, e-office, GPS tracking, approval workflows. Shipped a GPS-based check-in and an e-office approval flow to production.

2026 — Bespoke Systems

Freelance exploration: client dashboards, cinematic interfaces, performance tuning, interactive web — designing clean galleries and custom motion-layout transitions while solving real client problems.

Technical Skills

Languages

Frameworks

Styling & Animation

Real-Time & Database

Tools & Integrations

Bar length reflects how central each tool is to my core stack versus supporting tools — not a formal certification level.

GKI Digital Correspondence & E-Office System

Internship Project — GKI Pekalongan · github.com/abelsjh

TECHNOLOGIES

CodeIgniter 4

PHP 8.2

MySQL

RFID Hardware

WhatsApp Gateway

SMTP

KEY FEATURES

✓ Incoming Letter Tracking

✓ Outgoing Letter Tracking

✓ Digital Archive

✓ Multi-Level Approval Workflow

✓ RFID Attendance Logging

✓ WhatsApp Notifications

A comprehensive digital administration system built to automate church office operations. Features RFID-based congregation attendance tracking, a multi-level digitised letter disposition workflow, real-time automated reports, and automated updates via SMTP email and WhatsApp Gateway — spanning 8 integrated modules.

SECURITY CONSIDERATIONS

- ▶ Role-based access across administrative levels
- ▶ RFID-based identity verification for attendance
- ▶ Automated, timestamped audit trail via reports
- ▶ Controlled notification channels (SMTP / WhatsApp)

MY CONTRIBUTION

Designed and built the core disposition and correspondence workflow end-to-end, integrated the RFID attendance hardware with the backend, and connected automated reporting to SMTP and WhatsApp Gateway notification channels.

BookIt Marketplace

First Web Development Project · github.com/abelsjh/BookIt-Marketplace

TECHNOLOGIES

CodeIgniter 4

PHP

MySQL

WebSockets

Bootstrap 5

KEY FEATURES

✓ Real-Time Bargaining Engine

✓ Multi-Role User Flow

✓ Secure Checkout Flow

✓ Order & Transaction States

✓ Responsive, Mobile-Friendly UI

A web-based book marketplace featuring real-time price negotiation via WebSockets. Buyers and sellers can haggle live on book listings without page refreshes, enabling smooth peer-to-peer trading across a multi-role user flow spanning buyers, sellers, and system administrators.

SECURITY CONSIDERATIONS

- ▶ Role separation between buyer, seller, and admin
- ▶ Server-validated order & transaction state flow
- ▶ Session-scoped WebSocket bargaining channels

MY CONTRIBUTION

Built the real-time bargaining engine on WebSockets, designed the multi-role flow for buyers, sellers, and admins, and implemented the order and transaction state machine behind checkout.

PartsPro POS

Cashier & Inventory System for a Spare Parts Shop · github.com/abelsjh/demo-client

TECHNOLOGIES

Laravel

PHP

MySQL / SQLite

Barcode API

FIFO Inventory Engine

KEY FEATURES

✓ Barcode Scanning Checkout

✓ FIFO Batch Inventory

✓ 3-Zone Label Printing

✓ Owner / Kasir Roles

✓ Real-Time Ledger Reports

✓ Two-Location Stock Model

A feature-rich cashier and spare-parts inventory system for motorcycle repair and parts shops. Integrates camera-based barcode scanning, structured FIFO inventory tracking across stock batches, 3-zone label printing, and real-time ledger accounting reports across 7 core modules.

SECURITY CONSIDERATIONS

- ▶ Owner vs. Kasir role-based authentication
- ▶ Brute-force login throttling
- ▶ Hidden cost-code algorithm masking supplier pricing
- ▶ Race-condition-safe stock & transaction updates

MY CONTRIBUTION

Migrated the system from an early HTML/JS prototype into a full Laravel application, designed the FIFO batch costing and two-location stock model, and led a multi-session code review that fixed security issues, race conditions, and N+1 query problems ahead of client demos.

Leadership & Achievements

①

Festival Music Patriot — Head of Sponsorship & Public Relations

Institute Widya Pratama, 2024 & 2025 editions. Secured and negotiated corporate sponsorships totaling over **Rp 50,000,000** across two consecutive annual creative events — managing outreach, proposal writing, and sponsor relations from end to end.

②

Chairman, Youth Commission — GKI Pekalongan (2026–2028)

Elected to lead the church youth commission. Responsible for programme planning, inter-commission coordination, and driving community engagement initiatives across multiple generational groups within the congregation.

Leadership roles and recognitions reflect involvement outside formal academic coursework, demonstrating communication, organisational, and initiative-taking skills.
