

ABEL JASON

CREATIVE DEVELOPER | SYSTEM DESIGNER | STORYTELLER

Email: abeljason11@gmail.com | GitHub: github.com/abelsjh | Location: Pekalongan, Indonesia

ABOUT ME

I see systems not only as tools, but as experiences people interact with daily. I craft digital platforms that operate quietly yet effectively. By combining logic and visual storytelling, I design workflows that simplify real daily challenges and elevate the user's emotional experience. Every project becomes a place where I learn, explore, and shape ideas into experiences.

TECHNOLOGIES & TOOLS

Languages:	PHP, TypeScript, JavaScript, SQL
Frameworks:	Laravel, CodeIgniter 4, React, Next.js
Styling & Animation:	Tailwind CSS, Framer Motion, Bootstrap 5
Real-time & DB:	MySQL, SQLite, WebSockets (live updates)
Tools & Workflows:	Git, RFID Hardware Integration, WhatsApp Gateway Integration, SMTP Email Systems

MY EVOLUTION

2023	Beginning	Entered Information Systems. Explored early web stacks, logic structures, and systems logic.
2024	System Architecture	Mastered OOP, database normalization schemes, and structured software engineering architecture.
2025	E-Office & POS Systems	Designed operational POS platforms, custom attendance tracking workflows, and corporate software systems.
2026	Creative Freelance	Active freelancing. Crafting bespoke web experiences, interactive UI systems, and dashboards.

SELECTED PROJECTS (WORKS)

BookIt Marketplace

MARKETPLACE - WEB DEVELOPMENT

Tech Stack: CodeIgniter 4, PHP, MySQL, WebSockets, Bootstrap 5

A web-based book marketplace featuring real-time price negotiation via WebSockets. Buyers and sellers can haggle live on book listings without requiring page refreshes, enabling smooth peer-to-peer trading. Features a multi-role user flow including buyers, sellers, and system administrators.

Key Highlights:

- Real-time bargaining engine powered by WebSockets
- Secure checkout with order and transaction state flow
- Fully responsive and mobile-friendly layouts

GKI E-Office System

E-OFFICE - INTERNSHIP PROJECT

Tech Stack: CodeIgniter 4, PHP 8.2, MySQL, RFID Hardware, WhatsApp Gateway, SMTP

A comprehensive digital administration system built for GKI Pekalongan to automate church office operations. Features hardware RFID-based congregation attendance tracking, a multi-level digitised letter disposition workflow, real-time automated reports, and automated updates via SMTP email and a WhatsApp Gateway.

Key Highlights:

- Reduced letter disposition latency from days to minutes
- Automated attendance reporting and congregation databases
- 8 integrated modules spanning administration, correspondence, and security

PartsPro POS

POS SYSTEM - PROTOTYPE PROJECT

Tech Stack: Laravel, PHP, MySQL, Barcode API, FIFO Batch Inventory Engine

A feature-rich cashier and spare parts inventory management system designed for motorcycle repair and parts shops. Integrates camera-based barcode scanning, structured FIFO inventory tracking to monitor stock batches, 3-zone label printing, and real-time ledger accounting reports. Includes a hidden cost-code algorithm to mask supplier pricing.

Key Highlights:

- 3x faster checkout process and structured catalog searching
- Reduced cashier human error by an estimated 80%
- 7 core modules covering stock, cashiering, auditing, and reporting
